

Smart Interview Trainer

Low-fidelity wireframe specifications for nine core screens, ordered along the user journey. Each frame documents layout, components, navigation, controls, forms and spacing using standard UX conventions.

Document: Wireframe Spec v1.0
Fidelity: Low (greyscale, structural)
Grid: 8 pt spacing system
Date: June 17, 2026

SCREENS

2. Login
3. Register Page
4. Dashboard
5. Interview Setup
6. Interview Session
7. Final Interview Report
8. Progress Page
9. Profile Page

WIREFRAME · MARKETING

Purpose: Communicate value quickly and convert anonymous visitors into registered users.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Single-column, vertically stacked F-pattern; sticky top nav; max content width 1140px centered.
Components	Global nav bar, hero block, 4-up feature card grid, 3-step process strip, repeat CTA band, footer.
Navigation	Anchor links (Features, How it Works) with smooth scroll; nav routes to Login / Register.
Buttons	Primary: <i>Start Practicing</i> . Secondary: <i>See How It Works</i> . Repeat: <i>Create Free Account</i> . Utility: Login, Sign Up.
Forms	None — form friction deferred until after value is communicated.
Spacing	96px section padding (vertical rhythm), 24px card gutters, 8pt baseline grid.

Why these elements: A single dominant CTA reduces decision fatigue. Feature cards answer "what do I get?" and the 3-step strip answers "is it easy?" — the two questions that gate sign-up. The repeated CTA recaptures users who scroll past the hero.

Invalid email or password

Purpose: Authenticate returning users with minimum friction and clear error recovery.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Centered single-column card (~400px), generous whitespace, vertically centered in viewport.
Components	Logo, heading, form group, secondary options row, alternate-action link, inline error region.
Navigation	Logo → Landing; <i>Sign up</i> → Register; success → Dashboard; <i>Forgot password</i> → reset flow.
Buttons	Primary: <i>Log In</i> (full-width). Text links: Forgot password, Sign up.
Forms	Email (type=email), Password (with show/hide toggle), Remember-me checkbox. Inline validation on blur; error summary above form.
Spacing	16px between fields, 24px above primary button, 64px horizontal card padding.

Why these elements: A centered, single-column card removes distraction during a focused task. Inline errors near the field plus a summary satisfy the "clear error messages" requirement. Show/hide password lowers failed logins, and a visible "Sign up" path prevents dead ends.

Create Account

Already have an account? [Back to Login](#)

Purpose: Let new users create an account with the minimum fields needed to get started.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Centered single-column card (~400px) mirroring the Login screen for visual consistency; vertically centered in viewport.
Components	Logo, heading, four-field form group, primary submit, alternate-action link back to Login.
Navigation	Create Account → Dashboard (auto sign-in on success); Back to Login → Login; logo → Landing.
Buttons	Primary: Create Account (full-width). Text link: Back to Login.
Forms	Full Name, Email (type=email), Password (show/hide), Confirm Password. Inline validation on blur; confirm-match and password-strength checks before submit.
Spacing	16px between fields, 24px above primary button, 64px horizontal card padding.

Why these elements: Asking for only four fields keeps sign-up fast and student-friendly. Matching the Login card layout builds familiarity, and a confirm-password field plus inline validation prevent the most common account-creation errors before submission.

WIREFRAME · APP (AUTHENTICATED)

Purpose: Orient the user with performance at a glance and provide a single clear entry into a new session.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Persistent top nav + greeting bar; 4-up KPI card grid (2×2 on tablet, stacked on mobile); recent-activity list below.
Components	Global nav, greeting/action bar, KPI stat cards ×4, recent interview list rows, notification + avatar menu.
Navigation	Nav tabs → Practice / Progress; <i>Start Interview</i> → Interview Setup; <i>Review</i> → Final Interview Report; avatar → Profile / Logout.
Buttons	Primary: <i>Start Interview</i> . Per-row: <i>Review</i> . Utility: View all, avatar menu.
Forms	None in v1 (optional search/filter in v2).
Spacing	24px grid gutters, 32px between sections, 16px card padding.

Why these elements: KPI cards give immediate orientation and feed motivation. A single prominent *Start Interview* keeps the primary action obvious, while surfacing the weakest category nudges the next best action.

Start Interview

Purpose: Let users configure an interview *before* it begins — category, difficulty, length and answer mode — so they are never dropped into a session unprepared.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Centered single-column form (~640px); four labelled option groups stacked top-to-bottom; sticky action row at bottom. Sits between Dashboard → Start Interview and the Session screen.
Components	Cancel header, Category selector (5 options), Difficulty segmented control (3), Question-count segmented control (3), Answer-mode toggle (2), action row.
Navigation	Dashboard → <i>Start Interview</i> → this page; <i>Start Interview</i> → Interview Session (carries config); <i>Cancel</i> → Dashboard.
Buttons	Primary: <i>Start Interview</i> . Secondary: <i>Cancel</i> . Each option chip acts as a single-select control.
Forms	Category (single-select, required), Difficulty (single-select, default Beginner), Number of Questions (single-select, default 5), Answer Mode (single-select, default Voice + Transcript). Start disabled until a category is chosen.
Spacing	24px between option groups, 8px chip gaps, 32px above action row.

Why these elements: A dedicated setup step gives users control and sets clear expectations, preventing the disorientation of being thrown straight into questions. Segmented controls with sensible defaults make configuration a few taps, and disabling Start until a category is picked guarantees a valid session.

Transcript (editable)

"An abstract class can have..."

Skip

Submit Answer

Purpose: Present one question at a time and capture a text or voice answer without distraction.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Distraction-free single-column "exam" view; persistent context + progress bar pinned top; action row pinned bottom.
Components	Context/progress bar, question card, answer textarea, voice control cluster, editable transcript, action row.
Navigation	<i>Exit</i> → confirm dialog → Dashboard; <i>Submit</i> → next question; final submit → Final Interview Report; progress reflects position.
Buttons	Primary: <i>Submit Answer</i> . Secondary: Skip, Start Voice, Stop, Exit.
Forms	Answer textarea + editable transcript field. Submit disabled until an answer exists; mic-denied disables voice and hints to text.
Spacing	40px top/bottom safe zones, 16px stack rhythm, generous line-height on question.

Why these elements: A focused layout mirrors real interview pressure and reduces anxiety with a visible progress bar. The editable transcript handles speech-recognition errors gracefully, and the text fallback ensures the task never blocks on hardware permissions.

Dashboard

Purpose: Provide a complete interview evaluation report after all questions are answered — overall score, strengths, areas to improve, per-question feedback, a practice recommendation and next actions — so the session reads like a real interview assessment.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Single-column report (~720px). Stacked sections, top to bottom: Overall Score Hero, Strengths, Areas to Improve, Question Feedback cards (one per question), Final Recommendation, action row.
Components	Overall score ring + performance label, strengths list (✓), areas-to-improve list (•), per-question feedback cards (score, question, answer, covered/missed chips, expandable sample answer), recommendation band, action row.
Navigation	Reached automatically after the final answer is submitted (replaces per-question feedback). <i>Practice Again</i> → Interview Setup; <i>View Progress</i> → Progress Page; <i>Dashboard</i> → Dashboard.
Buttons	Primary: <i>Practice Again</i> . Secondary: <i>View Progress</i> , <i>Dashboard</i> . Per-card: expandable <i>Sample answer</i> .
Forms	None — read-only end-of-session evaluation report.
Spacing	32px around score hero, 16px between report sections, 12px chip gaps, 12px between question cards, 24px above action row.

Why these elements: Consolidating all feedback into one end-of-session report keeps the interview itself distraction-free and mirrors how a real evaluation is delivered. Leading with the overall score and strengths/areas-to-improve gives an at-a-glance verdict, per-question cards make the feedback reviewable in context, and the recommendation plus action buttons route the user straight into their next best practice.

Smart Interview Trainer — Wireframe Spec v1.0

07 · Final Interview Report

WIREFRAME · ANALYTICS

Purpose: Visualize improvement over time, surface strengths and weak topics, and route the user to targeted practice.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Top nav; filter bar; trend chart; category bar list; recommendation band; history table (cards on mobile).
Components	Filters, score-over-time line chart, performance-by-category bars, recommendation band, interview history table.
Navigation	Nav tabs; <i>Practice [weak topic]</i> → session pre-filled with weak category; <i>Review</i> → Final Interview Report.
Buttons	Primary: <i>Practice [weak topic]</i> . Per-row: Review. Utility: filter dropdowns.
Forms	Dropdown filters — category and time range; re-render chart/table on change.
Spacing	24px section gaps, 12px between category bars, 16px chart inset.

Why these elements: A trend line answers "am I improving?" — the core motivator. Category bars expose strengths and weaknesses instantly, and the recommendation band converts that insight into the next action, closing the practice → feedback → improve loop.

Save Changes

Purpose: Let users manage their account — personal info, password, preferences — and review their high-level stats in one place.

SPECIFICATION

ATTRIBUTE	DETAIL
Layout	Top nav + single-column stack of grouped setting cards; primary/secondary action row pinned at the bottom.
Components	Global nav, Personal Information card, Change Password card, Interview Statistics card (read-only KPIs), Preferred Categories chip selector, action row.
Navigation	Reached via avatar menu → Profile; nav tabs return to app; <i>Logout</i> → Login; <i>Save Changes</i> persists and stays on page with a confirmation.
Buttons	Primary: <i>Save Changes</i> . Destructive/utility: <i>Logout</i> . Category chips toggle on/off.
Forms	Full Name, Email (editable); Current + New password (show/hide, strength check); Preferred Categories (multi-select chips). Stats are read-only.
Spacing	16px within cards, 24px between setting groups, 32px above action row.

Why these elements: Grouping settings into labelled cards keeps a multi-purpose screen scannable and student-friendly. Read-only stats add context without clutter, preferred categories personalise future setups, and pairing Save with a clearly separated Logout avoids accidental sign-out.
